

Freedom of Information Act 2000 - Request Reference FoI/20/204

Gynaecology

Request details

I am requesting the information under the Freedom of Information Act 2000

When undergoing surgery such as a hysterectomy, bilateral salpingoophorectomy and freeing of adhesions for endometriosis

Please advise whether the gynaecology/gynaecology surgical department policy was to use LHRH analogues for this type of surgery in December 2016.

Response details

Cardiff and Vale University Health Board (the UHB) were using GnRH antagonists in 2016, and often this was pre-operatively, but it was not routine and typically in selected appropriate cases.
