

Freedom of Information Act 2000 - Request Reference FoI/20/395
Patient Administration Systems

Request details

I would like some information in relation to the above please.

- 1. Has Myrddin developed into what is referred to as WPAS, or are they individual systems in their own right?**
- 2. How robust are the audit features of these systems. For example, is it logged what a staff member has done (at a specific time) or can you only identify the date and time of access.**

Any detail you can give here is much appreciated, and or screen shots with test records if at all possible.

- 3. What is the purpose of the WCP system? How does it differ to the above systems in terms of functionality etc. Again I would be most grateful if you advise on the audit features.**

Response details

WPAS and WCP are both National applications supplied by NHS Wales Informatics Service (NWIS). It would not be appropriate for an individual health board to attempt to respond to queries regarding a national product. You may be able to obtain this information by requesting your request to NWIS via the following link:
