

Freedom of Information Act 2000 - Request Reference Fol/22/243
Thrombotic Thrombocytopenia (ViT)

Information Requested:

How many cases of blood disorders have been identified by the Heath Hospital? Broken down by type of disorder and covering the period of 2016 to 2022, broken down annually, with the latest being 2022 to-date.

I am particularly interested in cases related to the covid-19 vaccines, such as vaccine induced thrombotic thrombocytopenia (ViT) and other known disorders related to the covid-19 vaccines.

Response details:

The UHB's ViT clinics first started following the pandemic and the Covid-19 vaccinations and have been running for around 18 months. The UHB has identified a total of 5 patients during this time.
