Date.	rime.	

Tester: CIRCLI 1] ALERTNESS This includes patients who may be markedly drowsy (eg. difficult to rouse and/or obviously sleepy luring assessment) or agilated/hyperactive. Observe the patient. If asleep, attempt to wake with speech or gentle touch on shoulder. Ask the patient to state their name and address to assist rating. Normal (fully alert, but not agitated, throughout assessment) Mild sleepiness for <10 seconds after waking, then normal Clearly abnormal 4 2] AMT4 Age, date of birth, place (name of the hospital or building), current year. No mistakes 1 mistake 2 or more mistakes/untestable 2 3] ATTENTION Ask the patient: "Please tell me the months of the year in backwards order, starting at December." To assist initial understanding one prompt of "what is the month before December?" is permitted. Months of the year backwards Achieves 7 months or more correctly Starts but scores <7 months / refuses to start Untestable (cannot start because unwell, drowsy, inattentive) 24 ACUTE CHANGE OR FLUCTUATING COURSE Evidence of significant change or fluctuation in: alertness, cognition, other mental function	The 4 'A's Test: screening nstrument for delirium and cognitive impairment	Date: Time:	:

Starts but scores <7 months / refuses to start Untestable (cannot start because unwell, drowsy, inattentive) 2 4] ACUTE CHANGE OR FLUCTUATING COURSE Evidence of significant change or fluctuation in: alertness, cognition, other mental function leg. paranoia, hallucinations) arising over the last 2 weeks and still evident in last 24hrs No 0	Ask the patient: "Please tell me the months			
Untestable (cannot start because unwell, drowsy, inattentive) 2 24] ACUTE CHANGE OR FLUCTUATING COURSE Evidence of significant change or fluctuation in: alertness, cognition, other mental function (e.g. paranoia, hallucinations) arising over the last 2 weeks and still evident in last 24hrs No 0	Months of the year backwards	Achieves 7 months or more correctly	0	
4] ACUTE CHANGE OR FLUCTUATING COURSE Evidence of significant change or fluctuation in: alertness, cognition, other mental function eg. paranoia, hallucinations) arising over the last 2 weeks and still evident in last 24hrs No 0		Starts but scores <7 months / refuses to start	1	
Evidence of significant change or fluctuation in: alertness, cognition, other mental function eg. paranoia, hallucinations) arising over the last 2 weeks and still evident in last 24hrs No 0		Untestable (cannot start because unwell, drowsy, inattentive)	2	
	Evidence of significant change or fluctuation	n in: alertness, cognition, other mental function		
Yes 4		No	0	
		Yes	4	

4 or above: possible delirium +/- cognitive impairment

1-3: possible cognitive impairment

0: delirium or severe cognitive impairment unlikely (but delirium still possible if [4] information incomplete)

4AT SCORE	
------------------	--

GUIDANCE NOTES

Version 1.1. Information and download: www.the4AT.com

The 4AT is a screening instrument designed for rapid initial assessment of delirium and cognitive impairment. A score of 4 or more suggests delirium but is not diagnostic: more detailed assessment of mental status may be required to reach a diagnosis. A score of 1-3 suggests cognitive impairment and more detailed cognitive testing and informant history-taking are required. A score of 0 does not definitively exclude delirium or cognitive impairment: more detailed testing may be required depending on the clinical context. Items 1-3 are rated solely on observation of the patient at the time of assessment. Item 4 requires information from one or more source(s), eg. your own knowledge of the patient, other staff who know the patient (eg. ward nurses), GP letter, case notes, carers. The tester should take account of communication difficulties (hearing impairment, dysphasia, lack of common language) when carrying out the test and interpreting the score.

Alertness: Altered level of alertness is very likely to be delirium in general hospital settings. If the patient shows significant altered alertness during the bedside assessment, score 4 for this item. AMT4 (Abbreviated Mental Test - 4): This score can be extracted from items in the AMT10 if the latter is done immediately before. Acute Change or Fluctuating Course: Fluctuation can occur without delirium in some cases of dementia, but marked fluctuation usually indicates delirium. To help elicit any hallucinations and/or paranoid thoughts ask the patient questions such as, "Are you concerned about anything going on here?"; "Do you feel frightened by anything or anyone?"; "Have you been seeing or hearing anything unusual?"
